FACTS WORTH READING ABOUT

MONEY IN FRUIT GROWING

Leading Orchardists Prefer Harrison Grown Fruit Trees

ALIVE HEALTHY FRUIT-BEARING TREES DEPEND ON THE HEREDITY OF YOUR TREES

In the summer and early fall of each year, while fruit was on the trees, the utmost care was exercised in selecting the new "budding stock" from extra, vigorous, bearing trees showing superior strains with extra heavy bearing habits for the young Harrison fruit trees developing in the nursery.

TODAY FRUIT GROWING is making inroads on the big farms—little orchards lead the way to a profitable and worth-while fruit market.

YOU PAY NO MORE FOR HARRISONS' "BUD-SELECTED" TREES

The "bud-selection" method to propagate is very expensive—but whatever the expense they are the trees that give satisfaction.

Remember the inborn inheritance is the final quality built into Harrisons' trees. The young fruit trees are first generation from bearing.

FINEST QUALITY FRUIT TREES ARE PROPAGATED FROM BEARING ORCHARDS

If fruit trees are continuously propagated from the nursery rows, as practiced now by a large percentage of nurserymen, because it is cheaper, fruit trees begin to degenerate—and when the original was a poor type, the nurseryman, without knowing it, continues to reproduce poor, undesirable, small type fruit. Incidentally, in case there was a mixture in the nursery rows, how could a nurseryman propagate true-to-name trees successfully. Nothing can compare with our scientific method of "bud selection"—it always gives complete satisfaction.

HARRISONS' "BUD STRAINS"

Harrisons' "bud selection" of propagating direct from bearing trees of known sturdy ancestry, superior strains, being the highest coloring of fruit, with extra heavy bearing habits, has made the greatest contribution in directing and fixing the characteristics of the yield: of perfecting color; increasing the size of the fruits and the volume, as well as regularity of the crop.

GROWN ON "BRINK" OF ATLANTIC OCEAN WITHSTANDS MANY CLIMATIC CHANGES

Our favorable climatic conditions, being located only eight miles from the Atlantic Ocean with our rich soils of various types, coupled with the latest scientific and practical methods, as well as an unusually large number of experienced nurserymen, with ample facilities, enables Harrisons' to grow America's foremost, finest and best quality, true-to-name fruit trees, with superior merits and extra heavy annual bearing habits, which we guarantee, with proper care, will produce bumper crops in any fruitgrowing section of the United States.

Profits in Pollinization

All varieties of Apples, Pears, Plums and Sweet Cherries must be cross-pollinated to insure a full set of fruits, especially in a season when the weather is cool, cloudy, or raining during the blooming time. Plant at least 1 or 2 trees as pollinizers for every 20 trees of a single variety. A moderately self-fertile variety will produce a much larger crop, if a few trees of pollinating varieties are inter-planted at intervals. For the slightly self-sterile and self-sterile varieties, two or more pollinating varieties inter-planted will make the difference between a financial success or failure of your orchard.

Biggest Peach Tree Values in America

HERE'S A "LOAD" OF REASONS WHY HARRISON'S PEACH TREES ARE BETTER

- A—Our organization has over 75 years' experience.
- B—Every step in growing under the personal supervision of the Harrison Brothers.
- C—Thousands of trees in orchards from which our propagating trees are selected.
- D—Use of modern methods for planting, cultivating and digging.
- E—Acres of various types of soil.
- F—Ideal soil and climatic conditions.
- G—Co-operation with leading horticulturists and experimental stations all over the world.

Very Early Varieties

DIXIRED. Very early, yellow, cling, medium size, round, bright attractive red blush; good flavor; prolific bearer. Ripens two weeks earlier than Red Haven or about three days earlier than Red Bird. A new variety originated and introduced by the U. S. Department of Agriculture. Its most outstanding commercial feature is that it is a good shipper and has been planted extensively in Georgia to meet the demands for the very early Peach market.

DIXIGEM. Early, yellow, semi-freestone, red blush, medium size, good quality. Ripens a few days sooner than Red Haven. A new variety originated and introduced by the U. S. Department of Agriculture. Extensively planted in Georgia.

SUNRISE (N. J. 133). Very early. Attractive, well colored, firm medium sized, yellow fleshed, semi-freestone peach. Ripens just after Dixired and a few days earlier than Red Bird. Sold out for Spring 1960. Available for Fall 1960 shipment.

JERSEYLAND (N. J. 135) — Ripens a week sooner than Ranger, large, firm, attractive yellow flesh, freestone. Tree is hardy, sets buds freely. Introduced by New Jersey Experiment Station.

One-Year, Budded, 4- to 5-Ft.
Peach Trees
Ideal Economy Size

ERLY-RED-FRE—Very Early Large Peach, Commanding High Prices

ERLY-RED-FRE. U.S. Plant Patent #320. Very Early. Highly colored with an attractive bright red blush on a creamy white background. White fleshed, almost freestone. Large size fruit, fine quality with good flavor. Ripens three days later than Red Bird. Tree originated as a "chance seedling". Thrifty grower, hardy in fruit buds being a heavy bearer. Universally recognized as one of America's Greatest Early Commercial Peaches.

RED BIRD. Bright glowing color—"red as fire"—on a background of creamy white. Handsome. Large—as large as Elberta. Ripens about 40 days before Elberta. Clingstone.

GOLDRAY. New, very early variety. Red-bud sport strain of Golden Jubilee. Ripens two weeks earlier than its parent and at the same time as Red Bird. It is a "Bud Mutation" discovered in the orchard of Mr. J. Roy Cunningham, Lancaster, South Carolina, a customer of Harrison's. Identical in color, size, shape and fine flavor and delicious eating quality of Golden Jubilee, except that Goldray is semi-freestone.

JUNE ELBERTA. A big handsome red and gold Peach, highly colored, excellent quality and a dandy home early Peach.

HARRISON'S HARDY PEACH TREES

We absolutely guarantee Harrison-grown Peach trees, variety for variety, to be as hardy or harder than trees grown in any locality north of us.

The Sensational **REDHAVEN**

**Tops All Extra Early Peaches, Earliest Yellow
Freestone Peach**

**THE NEW EARLY RIPENING YELLOW PEACH THAT
RIPENS ABOUT 5 DAYS BEFORE GOLDEN JUBILEE**

The most promising early ripening yellow freestone peach ever introduced. A cross between Hale-Haven and Kalhaven made at the South Haven, Michigan, Experimental Station. Brilliant red color with creamy yellow background, smooth skin, almost fuzzless. Redden before it ripens. Bears heavy crops and should be thinned for best results. Every grower should try REDHAVEN. We have a good supply of genuine Redhaven trees this season. The demand for this variety is heavy, so order early.

TRIOGEM PEACH—Bears Large Crops

**HARRISON'S
SUPER QUALITY
FRUIT TREES
BEAR HEAVIEST
GROW FASTEST
AND
LIVE LONGEST**

TRIOGEM (N. J. 70)

Developed by the Master Plant Breeders of New Jersey
MEDIUM TO LARGE, FIRM, ATTRACTIVE

Ripens early, medium to large, oval, firm, high quality, high red color over entire Peach, yellow flesh, freestone, smooth, nearly fuzzless like J. H. Hale, one of its parents, colors several days in advance of its ripening, being 2 days later than Golden Jubilee, or 3 weeks earlier than Elberta. This, combined with its very slow rate of softening, makes it an ideal Peach for commercial growers. Hangs well to the tree after the Peaches become firm ripe. When picked hard to firm it is a good long distance shipper. This is the best commercial Peach ripening at this period, and is being planted now by some growers in preference to Golden Jubilee. Considered as the best new variety of Peach so far originated and introduced by the New Jersey plant breeders.

A REAL PROFIT MAKER

TRIOGEM has been fruited commercially in New Jersey and Maryland for several years. During this time it has topped all varieties in price on the New York and Philadelphia markets which ripen at this time during the summer. Several large commercial orchards have been planted with Triogem and its popularity is increasing each year.

➤ **SOUTH HAVEN.** Early mid-season, yellow, large, handsome, deep yellow with red cheek, freestone. Peaches of uniform size, delicate in flavor. Ripens 15 to 18 days ahead of Elberta. Trees are very hardy and productive. Adapted to cold climates and produces bumper crops in mild climates.

➤ **NEWDAY (N. J. 79)** A bright, showy, good quality, yellow, semi-clingstone peach. Ripens with Triogem (N. J. 70).

➤ **RARITAN ROSE (N. J. 97)** Extremely hardy, white flesh, nearly freestone, large size, high red color with good flavor. Ripens a few days earlier than Golden Jubilee. Excellent peach for home and local market.

➤ **GOLDEN JUBILEE.** Early—Fruit bright deep yellow, medium to large size, oblong shape. Good size, fine appearance and excellent quality with delicious flavor. Ideal for roadside stands and home orchards, also commercial orchards for nearby city shipments. It ripens about ten days earlier than Hale-Haven.

➤ **RANGER.** A fine yellow freestone, ripening at same time or just after Golden Jubilee. Beautiful peach. Very hardy, new variety, bears big crops when some other varieties under same weather conditions have light yields. Introduced by U. S. Dept. of Agriculture.

**HERE IS THE HIGHLY FLAVORED EARLY
WHITE FREESTONE PEACH YOU HAVE
BEEN LOOKING FOR**

CUMBERLAND

An outstanding favorite early white Peach. Is a comparatively new, white, nearly freestone variety that was developed by the New Jersey Experimental Station. The fruit resembles Belle of Georgia, both in appearance and quality, although it ripens about the same time or a little before Golden Jubilee.

RANGER PEACH—Yellow, Excellent Quality

A GREAT PEACH COMBINATION—REDHAVEN, TRIOGEM, HALE-HAVEN

Harrisons' Peaches

ARE A COLLECTION OF
THE WORLD'S BEST

HALE-HAVEN

Early midseason. Ripens just after Golden Jubilee has been harvested and about 14 days ahead of Elberta. Yellow freestone, large, high red color, firm, fine flavored. It takes on red color early and the peaches show good red color several days before ripening, which gives it a distinct advantage for marketing. When allowed to ripen fully upon the trees its flavor is undoubtedly the best of any yellow Peach. Tree is an extra strong grower and produces a bumper crop of fruit each season. Very hardy in fruit bud. One of its parents is J. H. Hale, from which it inherits its large size and fine color. The other parent is South Haven from which it attains hardiness, large crops yearly and strong growth. It is the best variety ripening just after Golden Jubilee and should be planted in every orchard. Excellent for fresh eating and quick-freezing.

BURBANK-JULY ELBERTA

U.S. PLANT
PATENT NO. 15

The Outstanding Medium Early Commercial Peach

Here is the peach that has caused a sensation wherever fruited. Growers in many sections say it is their best medium early, yellow, freestone peach for shipping, local markets and home use. Beautiful golden yellow, almost completely overspread with brilliant red. Ripens about the same time as Hale Haven, but on account of its vivid red color and yellow background with no green color, it can be picked for commercial shipments about four days sooner. Excellent in flavor, even superior to Hale Haven for fresh eating, freezing and canning. Hardy, sure cropper, large size, a sensational money maker. July Elberta is known by different names, such as Burnett Elberta, Burbank July Elberta, Kim Elberta, Burbank Elberta. We offer an outstanding strain selected from bearing trees. Season of ripening about two weeks sooner than Elberta (Original Strain).

Hale Haven Extra Large

POLLY. Early mid-season. A large, white flesh, red blushed, freestone, with a real sweet taste of excellent flavor. Trees will withstand temperatures of twenty degrees below zero and still produce big crops of peaches. Ripens about ten days earlier than Elberta. Polly is the peach to plant in the far-North.

AMBER GEM CLING. Midseason, long medium size, beautiful color with deep red blush, firm flesh. Delicious honey-sweet flavor. One of the best canning varieties. Tree hardy and a good cropper. Now being planted extensively in Virginia and Michigan for canning factories. New canning peach. Ripens same time as Hale-Haven.

FAIRHAVEN. Early mid-season, yellow freestone, medium large, nearly round, mostly bright golden in color with an attractive bright red cheek. Skin is smooth and very tough. Fruit very firm and ships exceptionally well. Ripens 7 days after Golden Jubilee.

CHAMPION. A Good Home Peach. White, freestone, very large; creamy white with red cheek, sweet, juicy, very high flavor. Champion has lost its past commercial importance because it will not carry satisfactorily under refrigeration, but as a home garden or a roadside Peach, it is one of the best. Tree is hardy, large grower and productive. Ripens ten days earlier than Elberta.

SUNHIGH. (N. J. 82.) A large, red, bright, smooth Peach which colors well all over before it ripens, softens slowly, making it a good commercial Peach. Flesh inclines to adhere to the pit when hard ripe. The variety seems to do best in hilly sections and requires thorough summer spraying. The fruit is large, roundish; thick-skinned, very uniform in size. Color deep yellow with red cheek. Stone is free. Ripens approximately 18 days before Elberta, at a time to bring high market prices. Sold out for spring 1960. Available for fall 1960 shipment.

HILEY. White. Early midseason. Bears huge crop of fancy Peaches. Freestone, medium size, highly red colored and is a very handsome Peach of exceptionally good flavor. Tree is strong grower, very healthy and an extra heavy bearer. Hiley resembles Belle of Georgia but ripens about 14 days earlier.

SOUTHLAND. Early midseason, yellow, freestone, medium to large, round, attractive red blush with mild, good flavor. Originated by the U. S. Department of Agriculture, being an ideal peach for the extreme Southern peach Belt. Vigorous tree, productive and fruit ripens at the same time as Hiley. Promising commercial peach.

SUMMERCREST. (N. J. 94.) Midseason, yellow, freestone, large with red blush and sweet flavor. Trees exceptionally vigorous, fruit ripens the same time as Belle of Georgia, which is a few days earlier than Elberta. Popular in New Jersey where it is known.

GOLDEN EAST. (N. J. 87.) Early midseason. Very large, high red color, yellow, freestone. Very good flavor. Ripens 15 days earlier than Elberta. Good roadside market and commercial Peach.

FINEST FLAVORED
YELLOW PEACH

The Peach of the Future HALE HARRISON

U. S. Patented **BRILLIANT** No. 814

Sensational! New! Colossal!

Yellow freestone ripening during midseason 3 to 4 days earlier than Elberta. The fruit is nearly fuzzless and has a brilliant cardinal red almost completely covering a golden yellow ground color even when growing in shade in the interior of the tree. Fruit throughout the tree is uniformly large even when unpruned or unthinned. Tree is large, vigorous and rapid grower. Self pollinating, it bears tremendous crops year after year. Very hardy in bud and blossom and highly resistant to brown rot. Keeping qualities are excellent.

FOR HOME OR COMMERCIAL ORCHARD

Whether you are going to plant one tree for home fresh eating, canning or freezing or one thousand trees for a commercial orchard, we unhesitatingly recommend Hale Harrison Brilliant as the best peach to plant. It will give you more pleasure to eat or more profit in growing than any other peach known today.

WILL REPLACE ELBERTA

For many decades Elberta has been the standard peach of the world by which all peaches have been judged, tests and observations by leading peach authorities confirm our belief that the new sensational Hale Harrison Brilliant surpasses the Elberta in every way.

OUTSELLS AND OUTBEARS

Hale Harrison Brilliant outclasses them all. It is really the one peach that has everything. Its beautiful attractive appearance, huge size, superior delicious flavor makes it have extraordinary favorable eye appeal, resulting in higher prices. This combined with its BUMPER crops, "Original tree has produced over twenty bushels a year" make it the outstanding moneymaker.

WIDELY ADAPTED

Hale Harrison Brilliant has been planted in forty-two states. Reports from these plantings prove it is equally as adaptable to the far south as it is in central and western areas and it even produces highly satisfactorily in Canada and other northern peach sections.

LONG PICKING SEASON

One of the finest features of Hale Harrison Brilliant is its early coloring, the golden yellow ground color appears weeks before it begins to ripen, this is the one peach that has a high sugar content even when it is hard. Fruit growers have been amazed at its ready to eat coloring and general smooth skin appearance several days before it is ready to pick and ship, this means a long picking season. Records show that it surpasses in keeping qualities any other peach on long distance shipments.

HARRISONS AMAZING GUARANTEE

Several years of testing in co-operation with leading fruit authorities convince us as to the outstanding merits of Hale Harrison Brilliant that we can make the following guarantee.

"Each and every Hale Harrison Brilliant is a true reproduction of the original strain, it will produce more satisfaction to you than any other peach variety that ripens during its season, on proper proof of failure to do this we will furnish you without charge an equal number of peach trees of any other variety that you desire."

Back of this guarantee are the resources of Harrison Brothers Nurseries with an enviable record of seventy-six years in the Nursery and Orchard business.

DISCOVERY OF THE HALE HARRISON BRILLIANT

This sensational new peach was discovered by Mr. Oscar F. Jones, near Crozet, Virginia in the famous mountainous Albemarle County section. He was manager for more than 30 years for the A. C. Bruce orchards, who planted many thousands of Harrison grown peach trees, starting in 1902. A life long horticulturist, he is a pioneer in one of the largest peach growing districts of the United States.

WHAT PROMINENT GROWERS SAY

Mr. C. Purcell McCue, Greenwood, Virginia—"Personally, I feel this peach will replace ELBERTA in this section."

Mr. C. E. Starkweather, Crozet, Virginia—"It bears larger, better colored peaches even with a heavier crop than the Elbertas do."

Mr. Lee T. Carpenter, Louisa, Virginia—"If it proves out in tests as good as it is in its original habitat I consider it to be the greatest find since Elberta in the 1870's."

Nininger Orchards, Roanoke, Virginia—"The parent tree of this peach is the largest and the most prolific I ever saw and when it is loaded with those large, uniform fruit, one hundred per cent colored it is a sight to be remembered."

Mr. Edward D. Daugherty, Crozet, Virginia—"I know something of the HALE HARRISON BRILLIANT and consider it a very unusual variety which will soon replace Elberta if properly distributed and advertised."

Mr. H. P. Rhodes, Winchester, Virginia—"The 500 Hale Harrison Brilliant peach trees I got from you and planted during November of 1949, that 498 are growing and have made a tremendous growth with dark green, healthy leaves and sturdy limbs. I was over to Crozet this summer and got three bushels of this amazing peach from Mr. Oscar Jones, they were off of the parent (16 years old) tree, which had probably twenty bushels which he sold off the tree for \$4.50 per bushel. They were the most perfect example of a very large, delicious firm peach I have ever seen. Will eventually replace Elberta. I want to plant another block, as I believe and all of the fruit men of Winchester, Virginia agree with me, that this peach is the answer to a fruit grower's prayer."

Several hundred half-bushel cell type paper cartons of HALE HARRISON BRILLIANT peaches grown in Northern Virginia were shipped during August 1955 from New York City by steam-ship under refrigeration to Buenos Aires, Argentina, South America, being twenty days in transit. Peaches arrived in GOOD CONDITION bringing FABULOUS PRICES.

Ripens 3 to 4 days earlier than Elberta. Finest flavored yellow peach.

76 YEARS LARGEST GROWERS OF HIGH QUALITY TRUE-TO-NAME PEACH TREES IN THE WORLD

NATIONAL *Reputation* J. H. HALE

Originated by the late PEACH KING

MIDSEASON—Ripens 2 to 3 days before Elberta.

Original Strain J. H. HALE

Our "Hales" are propagated direct from the original strain, the variety originated by the late J. H. Hale of South Glastonbury, Connecticut and Fort Valley, Georgia, known as the Peach King of America. There are many types and strains of J. H. Hale grown, but the only one worthy of commercial importance is the original strain, which is the extra large, round, highly colored Peach. The original strain necessitates cross-pollination and it is necessary, for proper results, to plant a few Belle of Georgia or Elberta or Hiley or any other variety of Peaches along with Hale for cross-pollination.

Extra Large Size Yellow, freestone, extra large, beautiful red coloring, firm and of the highest quality and enticing flavor. J. H. Hale ripens about two or three days prior to Elberta.

HARRISON BROTHERS
NURSERIES
BERLIN, MARYLAND

J. H. HALE—Giant
Size, Enticing Flavor

Belle of Georgia

The Queen of Flavors

THE BEST WHITE MID-SEASON VARIETY

Ripens midseason. Color creamy white with red cheek. Flesh white, red near pit. Size large, freestone. Belle of Georgia, for some time, has been recognized as the best all-around white Peach on the market. It is easily the best shipping white Peach.

Early Elberta

Midseason. Yellow, freestone, large, lemon-yellow with a dark cast, blushed with vivid red. Beautiful appearance, high quality, being somewhat similar to Elberta, although a trifle better flavor; rich golden tender flesh, yet firm and has a delightful flavor; excellent for canning. Gleason strain which ripens three days earlier than Elberta.

- Fruit Large
- Delicious Flavor
- Attractive
- Big Crops
- Very Hardy
- Easy to Grow

BELLE OF GEORGIA
The Finest Flavored
White Peach

SULLIVAN EARLY ELBERTA

An Early Ripening Red Bud Sport of Elberta
MIDSEASON YELLOW—FREESTONE

Identical to Genuine Elberta except it ripens about seven days earlier. Yellow freestone, firm, juicy, rich, good flavored. Equally attractive as Elberta and is a good keeper. Good for either home or commercial planting.

➤ **M. A. BLAKE (N.J. 117)**—New, midseason peach. Medium to large size, good coloring, firm, yellow, freestone of good quality. Ripens four to five days earlier than Elberta. The fruit remains firm and hangs to the tree after it becomes highly red colored. It is rapidly replacing Elberta in many New Jersey orchards. Sold out for Spring 1960. Available for Fall 1960 shipment.

➤ **REDSKIN**—Introduced by University of Maryland. Cross between Elberta and J. H. Hale. Ripens slightly ahead or with Elberta. The tree is vigorous, fast growing and productive. Wood is hardy and the buds survive low winter temperatures along with the hardiest varieties. The fruit of the Redskin is round, yellow flesh with little or no color near the pit. It is a complete freestone, firm flesh of excellent shipping quality, well colored with a deep red blush covering the fruit even when ripening under shady conditions. In taste, it is aromatic, vinous and sweet. Due to the firmness, it is rated high for canning. Fruit develops good size even with heavy load on trees.

ELBERTA

(ORIGINAL STRAIN)

Internationally Famous—The Standard by
Which All Other Peaches are Judged

Midseason. Yellow, freestone. Fruit is large to extra large; golden yellow with brilliant shades of red; firm, juicy, rich, sweet and good flavor. Elberta has the greatest international reputation of any Peach. It has been the standard for all other Peaches almost since the date of its introduction. The coloring of Elberta is practically perfect. The rich, yellow skin is almost entirely covered with dark red blush upon the sunny side. The attractive appearance and uniform large size serve to sell it almost on sight. We offer original strain trees which is the best strain obtainable.

Save Disappointment—Plant Only Harrison ORIGINAL STRAIN Elberta

Today, there are more than seven distinct types and strains of Elberta, bearing fruit in the orchards of this country. To compare the various sizes, shapes, texture and red coloring of these Elberta with those grown "on original strain trees" gives sufficient reason why they sold this year at a premium of \$1.00 to \$2.00 per bushel on the New York and other leading fruit markets.

They Cost No More

Why plant degenerated strains of Elberta when you can plant Harrison's heavy yielding original strain trees. They can be purchased at the lowest price that high quality trees can be produced for. It is true trees, size by size, can be produced cheaper by budding them from non-fruiting trees in the nursery row, but this method causes degeneration. Trees grown in this manner will be lighter croppers and require a longer time in coming into bearing.

GAGE ELBERTA

"Bud Sport" of Elberta, disease resistant. Tree is just as vigorous as original Elberta, but instead of growing upright, its branches are more of spreading nature. Due to high resistance to bacteriosis, the tree retains its foliage and the fruit ripens 3 to 4 days later than Elberta.

Brackett

Mid-Season
Late

1. Size
2. Quality
3. Color

A Profitable Commercial Variety Slightly Later Than Elberta

Brackett is a comparatively new commercial Peach in some sections but wherever tried it has given uniformly good results. During the past thirty years we have planted many thousands of this variety in but wherever tried it has given uniformly good results.

The fruit is rich yellow, with dark carmine cheek. The size runs fully as large or larger than Elberta. Flesh is deep yellow, extremely juicy and is absolutely freestone. Fruit is much better flavored than Elberta. Good shipper.

Popular On the Markets

Brackett commands unusually high prices on the market and often outsells Elberta twenty-five to fifty cents per bushel. We know the grower who needs a Peach ripening slightly later than Elberta will make no mistake in planting Brackett.

Plant Harrison's Original Strain

HARRISONS' were the first to popularize this great variety and distribute it throughout the Peach-growing sections. We offer trees that are propagated direct from the original strain and they are sure to produce results.

NEWEST VARIETIES OF PEACHES

TRUE-TO-NAME

ONCE PLANTED, HARRISON PEACH TREES TAKE ROOT AND DEVELOP VERY RAPIDLY—THEY ARE QUALITY BRED, READY FOR EARLY FRUITING.

➤ **JULY HEATH (OTHELLE CLING)**. Midseason, about 10 days before Elberta. White-fleshed, clingstone, large, red skin color. High quality fruit and hardy in fruit bud and wood. Dependable cropper and standard for a white cling type peach.

➤ **FRANK**. Late, 10 days to 2 weeks after Elberta. Yellow-fleshed, clingstone, large, attractive peach for a late variety. Good quality fruit. Especially dependable bearer over a wide area.

➤ **MAYGOLD**. New variety, cross between Sunhigh and Southland. Ripens three days earlier than Dixied. The fruit is clingstone, medium sized, red bluish, yellow ground color, yellow flesh, good flavor. Trees are vigorous and productive. Very low chilling requirements for fruit and leaf buds. Should be planted in the "Deep South".

➤ **POPPY**. New, mid-season, cross between Frank and Hale Haven. Introduced by Missouri Experiment Station. Yellow, freestone, large, fine texture, and fine flavor. Ripens 8 to 10 days earlier than Elberta, which it resembles. Peach appears to be ripe a week or ten days before it actually reaches the hard ripe stage. Good shipper.

➤ **SUNHAVEN**. New variety just introduced by Mr. Stanley Johnston of the South Haven, Michigan Experiment Station. Cross Redhaven by J. H. Hale and Hale Haven. Ripens 10 days earlier than Redhaven, which it resembles in red color. Very early. Fruit is medium-large size, nearly round and uniform in shape. Skin color is much like Redhaven. Largely high bright red with enough bright golden background color for attractive appearance. Yellow flesh, fine-textured, firm, good flavor. Freestone when fully ripe but otherwise a partial cling. Trees hardy, large, vigorous and productive.

➤ **REDGLOBE**. New, just introduced by U. S. Dept. of Agriculture. Early mid-season, yellow, freestone, medium to large, bright and attractive red color. Firm, fine-textured flesh, good in flavor. Ripens about 16 days earlier than Elberta.

➤ **LATEROSE (N.J. 109)**. Late, white, freestone. Large, ripens 10 days later than Elberta. Excellent for home canning and freezing. Tree hardier than Elberta.

➤ **LORING**. New variety, introduced by Missouri Experiment Station. Yellow, freestone, large, firm peach. Ripens 10 days earlier than Elberta. Fruit most nearly resembles Golden Jubilee. Sold out for spring 1960. Available for fall 1960 shipment.

➤ **ALAMAR (U. S. Plant Patent 930)**. New variety recently introduced. Late, yellow, freestone, skin yellow with very high red blush. Pit small. Excellent long distance shipper. Ripens about a week earlier than Rio Oso Gem, which it most nearly resembles. An excellent variety for commercial canning and freezing. 15¢ extra per tree.

➤ **EARLY EAST (N. J. 134)**. Very early, cross between J. H. Hale, sloppery by Admiral Dewey Yellow, freestone when tree-ripe, medium to large, firm, skin attractive red. It is hardy and productive. Ships well as commercial peach. Ripens 10 days earlier than Golden Jubilee.

➤ **RICHHAVEN**. New variety just introduced by Mr. Stanley Johnston of the South Haven, Michigan Experiment Station. Cross Redhaven by J. H. Hale and Hale Haven. Ripens 2 to 3 days earlier than Hale Haven. Early mid-season. Fruit is large, nearly round and uniform in size and shape. Large bright red blush on area exposed to sun with stripes of red and gold for the background color. Very attractive in appearance. Yellow, freestone, unusual thick tough skin adds to the handling and shipping ability of the fruit. Tree hardy, vigorous and productive.

➤ **WILDROSE (N.J. 118)**. Best white-fleshed freestone peach to follow Raritan Rose. Fruit is large, round oval, well colored with red, and has a clear white flesh of high quality.

➤ **GOLDGEM (N.J. 197)**. Attractive, large, yellow-fleshed, much firmer than Golden Jubilee, resembling Newday. Ripens after Jerseyland. Sold out for spring 1960. Available for fall 1960 shipment.

➤ **SUMMERQUEEN (N.J. 157)**. A large, attractive, firm, yellow-fleshed peach of excellent quality ripening about with Sunhigh and just before Golden East. Less susceptible to bacterial spot than Sunhigh. It has large, showy blossoms, sets more fruit buds than Sunhigh. Should be planted with another variety of peach to insure proper cross-pollination. Sold out for spring 1960. Available for fall 1960 shipment.

➤ **GOLDENRED**. New, cross of Early Elberta and Hale Haven. Originated by Oklahoma State University. Yellow freestone, high quality, and attractive red color with golden background color. Ripens same time as Red Haven. Sold out for spring 1960. Available for fall 1960 shipment.

➤ **LATE ELBERTA**. Late. Large, yellow, freestone, good quality, excellent flavor. Ripens between autumn and Lizzie.

HARRISON'S—GROWERS OF THE BEST NEWEST VARIETIES

**Bud-Selection
THE KEY TO
BETTER FRUITS**

NEWEST VARIETIES' OF PEACHES

TRUE TO NAME

Harrisons' "Bud Strains"

Some sixty years ago, and almost every year since, Harrisons' have planted orchards, not alone for fruit but principally to secure the type of parent fruit tree that was characteristic of a "variety" dominant in bearing qualities coupled with health, vigor and ability to withstand changeable climatic conditions. This type of tree became the parent supplying the budding stocks for future orchards in America and true-to-name varieties were assured.

CORONET. Most popular very early ripening peach, CORONET—newest variety cross between Hale Haven and Dixigem. Ripens 3 days earlier than Dixigem and Jerseyland also week ahead of Redhaven. About three-quarters of peach, bright, attractive red blush over good yellow background color. Flesh is yellow, firm, smooth texture, good flavor, medium size, nearly Freestone. Introduced by U. S. Dept. of Agriculture as the ideal variety to plant in future orchards in place of Dixigem.

REDCAP. Very new popular variety. Just introduced by U. S. Dept. of Agriculture. Cross between Southland and Dixired. Ripens one or two days earlier than Dixired, which it resembles. Attractive bright red blush covering three-fourths of medium sized, clingstone peach. Flesh is yellow, firm with good flavor. Recommend planting Redcap in place of Dixired.

CARDINAL. New variety, an offspring of Hale Haven, which ripens four days ahead of Dixired and week earlier than Red Bird. Attractive red blush over good yellow ground color, with smooth skin. Flesh is yellow, firm, clingstone, medium textured and good flavor. About size of Dixired, also in color, appearance and firmness. New variety just introduced by U. S. Dept of Agriculture with surprising popularity in the South.

HILAND. New variety cross between Southland, Hiley and Hale Haven. Ripens two days earlier than Cardinal, also five days ahead of Dixired, being eighteen days earlier than Red Haven. Attractively red colored, flesh is yellow, fairly firm, clingstone, medium size, good flavor. Introduced by U. S. Dept. of Agriculture.

TULIP. Very early. New variety originated by Missouri Fruit Experiment Station. Ripens at same time as Dixired and Redcap being six weeks earlier than Elberta. Medium to large size nearly round with good red color even before picking time, flesh, yellow, firm, fine texture, excellent flavor, free-stone. Stands shipping well.

SHINN'S DELICIOUS. A true mutation, being very early ripening budsport strain of Burbank July Elberta, U. S. Plant Patent #15, discovered by Mr. C. T. Shinn and Mr. L. S. Smith in their orchard near Russellville, Arkansas. Identical in large size, beautiful red color with handsome golden yellow background color, yellow flesh, freestone and superior flavor as its parent, however, its most appealing characteristic is that it ripens three weeks sooner, between Red Bird and Red Haven, making it about five weeks earlier ripening than Elberta. Many growers say it is better than Starking Delicious peach U. S. plant patent #806.

REDCREST (N. J. 126). New, attractive, large, firm, yellow, freestone peach. Ripens seven days earlier than Elberta. Sold out for spring 1960. Available for fall 1960 shipment.

M. A. BLAKE (N. J. 117). New midseason peach. Medium to large size, good coloring, firm, yellow, freestone. Ripens four to five days earlier than Elberta. Sold out for spring 1960. Available for fall 1960 shipment. See page 8

AUTUMN (N. J. 145). See description on page 12

N. J. 137. Promising, very early ripening; new variety, still to be named. Large size, bright red blush, yellow, ripens between Sunrise and Jerseyland. Sold out for spring 1960. Available for fall 1960 shipment.

KEYSTONE. Just introduced by U.S. Dept. of Agriculture. Cross by Newday and Southland. Ripens between Golden Jubilee and Triogem. Fruit is medium-large size, round, high red color with bright golden background color. Yellow flesh, firm, smooth texture, good flavor, freestone. Trees are vigorous and productive.

This is Your PROTECTION

Every customer is assured of Harrisons' Hi-Quality Trees and Plants at all times. Expert growing on proper soils, careful digging and packing is Harrisons' policy on every order. Every tree and plant we ship is guaranteed to be strictly first class, free from injurious diseases and insects and to reach you in good condition.

Any time trees or plants are received that do not meet these standards they will be replaced free of charge or your money refunded.

Continued growth depends on soil, weather conditions, planting and after care. After ten days it is mutually understood that the nursery stock is satisfactory; however, we will replace nursery stock that dies from unavoidable causes at half price, if notified within two months after its arrival.

Peaches

Genuine SHIPPERS LATE RED

Midseason-Late Large, round, yellow, freestone, very attractive with high red color. It is a Hale type of Peach, having good quality and brings high prices on the fruit

markets. Ripens three days later than Elberta. A good commercial Peach as it is a prolific bearer of large size, highly red-colored Peaches and is a favorite wherever planted. Harrisons are growing the original strain of Shippers Late Red which is far superior to other types and strains of this variety. Should be planted in every commercial orchard, as well as home orchards. Dependable trees which are absolutely "true to name."

**Harrisons' Maryland Grown
Peach Trees are the
Finest Quality in the World**

Late Ripening Varieties

LATE ELBERTA. (Gemmer's Late Elberta.) Late, yellow, freestone, large, high red color, fine quality, good shipper. Is a typical Elberta in fruit and tree characteristics. But ripens 4 to 5 days later than Elberta of the original strain.

LIZZIE. Late, distinct type of Elberta, very large, freestone, yellow, which ripens 14 to 16 days later than Elberta, having same prominent coloring characteristics as its parent.

RIO OSO GEM

The World's Greatest Peach

The sensational Peach which has caused the greatest amount of favorable reports of any Peach introduced in a half century is that marvelous, big Peach, the World's largest, being a patented variety, the Rio-Oso-Gem, U. S. Plant Patent No. 84. It has now been fruited in all Peach-growing districts in the United States and Canada, and has definitely proven itself to be the best all-around commercial Peach. Ask any man who has grown the Rio-Oso-Gem.

THE BEAUTIFUL GLORIFIED PEACH

This beautiful Peach has a brilliant, bright red color, running around 95% good red, whereas they are easy to pack as U. S. Fancy grade. The size of the Peach is all that anyone can expect, as many of these Peaches will run a pound or more in weight and in many instances have been reported that the crop would average three-quarters pound per Peach. The flaming, beautiful bright red color in the cheek, along with an attractive orange-colored background, has earned it an envious reputation as being the prettiest Peach grown.

BEST FLAVORED COMMERCIAL PEACH

The unexcelled flavor is better than that of J. H. Hale and Elberta. The enticing flavor makes it a very popular Peach for fresh eating. The rich flavor is retained when canned or preserved. Now recognized as the leading canning Peach in California. Rio-Oso-Gem is the only Peach which can be processed by quick freezing and still retain its firm texture, with its beautiful, rich, golden yellow flesh and the same flavor as when picked. We have quick frozen Rio-Oso-Gem Peaches which were picked and processed on September 1, 1944, which are still holding up in excellent condition.

RECORD BREAKER FOR LONG DISTANCE SHIPMENTS

The Rio Oso Gem is the best of all Peaches for long distance shipments and the fruit will stand up longer after being picked than any other variety of Peach in existence. This stupendous variety adapts itself exceedingly well for shipments in refrigerator cars pre-cooled, under standard refrigeration for trans-continental hauls. This is the greatest Peach for shipments on trucks under ventilation, as its hard, firm texture insures arrival in excellent condition.

NATION'S HIGHEST NET CASH MONEY-MAKER RIO-OSO-GEM

IDEAL FOR HOME ORCHARDS

Starts to ripen 7 to 10 days later than Elberta. Rio-Oso-Gem is a very prolific bearer and dependable annual cropper.

RIO-OSO-GEM IS NO EXPERIMENT

Colonel and Mrs. Frank Sleeter, Round Hill, Virginia, wrote, "We have the land ready for the 800 Rio-Oso-Gem peach trees, 5 to 6 feet for April, 1950 planting. It is a wonderful peach and we have had marvelous results marketing it last year at \$6.00 per bushel, in spite of the low market price prevailing during the summer of 1949."

READ WHAT FELLOW GROWERS SAY

We have received several hundred complimentary letters highly praising the Rio-Oso-Gem Peach, U. S. Plant Patent No. 84, from all over the United States, some of the typical remarks are from people such as Fussell-Graham-Alderson Company, Forest City, Arkansas: "We have about 1,000 of Harrisons' Rio-Oso-Gem Peach trees from which we have been harvesting the largest and prettiest Peaches I ever saw. We sold our Elberta Peaches, U. S. No. 1 grade at \$2.25 per bushel and we had no trouble in picking the Rio-Oso-Gem Peaches 2 1/4 inches and up which we sold at \$4.00 per bushel, f. o. b. Forest City, Arkansas."

Mr. H. Frank Smith, Prop. Hillcrest Orchard, Dover, Arkansas, writes: "This year's crop convinces me that the Rio-Oso-Gem, U. S. Plant Patent No. 84, is the very finest Peach and has certainly proven such with me. It has very fine qualities as a canner and people go wild about it. It always brings the highest prices for me."

Mr. Charles Heilig, Sewell, New Jersey, Gloucester County, said that the most handsome and the best Peach of the forty years' experience that he has had was his first crop of Rio-Oso-Gem on 400 trees, three years old, from which he picked during early September 324 bushels and which he sold at an average price of \$5.00 per bushel at his farm, grossing him more than \$1,600.00 from this very young orchard. He bought 620 Rio-Oso-Gem trees for planting November, and said his future plantings would be Rio-Oso-Gem.

AMERICA'S MOST FAMOUS PEACH

Mr. E. R. Connor, fruit grower and broker, of Stephen City, Virginia, in the famous Frederick County fruit section, was exceptionally well pleased with his first crop of Rio-Oso-Gem Peaches on his three-year-old trees which he picked during early September. From his 400 trees, three years old, he picked a 300-bushel crop for which he was offered \$3.75 per bushel, f. o. b. Stephen City, Virginia, for the entire crop, but he refused the sale so that he could sell the Peaches in smaller quantities at high prices to his customers throughout the Shenandoah Valley of Virginia and nearby cities. He planted 100 more trees two years ago which had a few Peaches on them this summer. Connor states he wishes he had 5,000 Rio-Oso-Gem Peach trees, U. S. Plant Patent No. 84, planted in his Orchard instead of 500.

RIO-OSO-GEM IS A "MUST" FOR EVERY GROWER

There are still big cash profits in Peaches, provided you grow the right varieties and in the near future you will see where the Rio-Oso-Gem, U. S. Plant Patent No. 84, will be getting more prominence each year. It is predicted that within a decade or so, it will be the most extensively planted commercial Peach in America.

HARRISON'S famous PLUMS

AMERICA'S BEST VARIETIES

ABUNDANCE. Early, large, color pinkish red changing to darker red, with thin bloom. Yellow flesh. Very juicy, sweet and tender, pleasantly aromatic. Hardy, very productive. Adaptable to a wide diversity of soils and climates.

BIG MACKEY. Late. Largest and best Damson, being an improved strain of Shropshire Damson. Freestone. Deep purple juicy, rich flavor, small stone. Fine for preserving. Easy to grow, produces immense crops. Should be planted in every orchard. Large size fruit makes ideal jams, preserves and jellies. An excellent variety for fresh fruit shipments to city markets, always demanding high prices.

BURBANK. Early, about one week after Abundance. Large, cherry-red with thin lilac bloom. Flesh amber-yellow with rich, sugary flavor; high quality and very productive. A product of Burbank, the master plant breeder. Should be in every orchard.

FORMOSA. A midseason variety of excellent and prolific bearing qualities. Large greenish yellow, overlaid with red. Alternate bearer. Heavy cropper.

ITALIAN PRUNE (Fellenberg). Late, medium size, freestone, dark purple, delicious. Fine for drying.

GRAND DUKE PRUNE. Late. Commercial variety. Purplish-black, juicy, sweet, excellent for cooking.

LOMBARD. Midseason. Medium size, showy purplish red fruit, excellent quality for canning, cooking, preserving or spicing. Prolific cropper.

MONARCH. Very large, bluish purple. Juicy, golden green flesh. Bears early and abundantly. Excellent for market.

BRADSHAW. Very large, fine early Plum; dark violet-red, juicy and good. Very productive; valuable for market. Quality is excellent, color attractive. Good canner.

METHLEY. A recent introduction which is rapidly gaining popularity due to its fine quality and handsome appearance. The fruit is medium to large size, reddish purple in color with red flesh. It is just sweet and of distinctive flavor. The tree is vigorous and upright in growth habit. Does well on most types of soil and is a heavy fruit cropper.

RED JUNE. Early, medium size, garnet-red color, thin bloom, flesh light yellow, somewhat mealy, sweet, aromatic. Trees are healthy, hardy and productive. An early market Plum.

BRUCE. Early, medium size, very firm, fine quality. Beautiful bright red color with yellow background. Very productive. Popular in Southern States. Plant another variety with Bruce for pollination.

SATSUMA. Midseason. Best flavored semi-freestone, blood-flesh Plum known. Large size. Flesh dark purplish red, juicy, sweet, possessing an alluring aroma. Originated by Luther Burbank.

SHIRO (Early Gold). Early. Fruit is very large, golden yellow, semi-transparent, covered with bright scarlet-red blush.

SHROPSHIRE DAMSON. Late, medium size, dark purple. Very productive. The best for preserving. The popular old-fashioned Damson variety.

STANLEY PRUNE. Midseason. Freestone, large, new Prune variety, outstanding characteristics. Considered best for cooking and fresh fruits.

WICKSON. Midseason. Extra large size, color dark red, thin bloom, flesh amber-yellow, firm, sweet.

YELLOW EGG. Late. Large, golden yellow. Good for cooking. Largest and handsomest of yellow Plums.

APRICOTS

The Apricot is one of the most delightful luscious fruits grown, when eaten fully ripe and fresh from the tree. It is remarkable that such a rich and beautiful, golden, sweet fruit is not planted more, especially since it ripens just after the early Cherries and before the best early Peaches.

ALEXANDER. Early, prolific, freestone, orange, with red blush; very juicy and sweet flavor. A large, prolific sort that will withstand adverse weather conditions. This variety deserves greater popularity. The best.

EARLY GOLDEN. Pale orange, juicy and sweet. Is a hardy prolific bearer; ripens first of July.

SUPERB. Very good quality. Fruit is beautiful, light salmon colored, best of the older varieties. Tree is large, very thrifty, hardy and is extremely productive in fruit.

APRICOTS CAN BE GROWN ANYWHERE PEACHES SUCCEED

NECTARINES

Delicious for Eating

There is a mistaken idea that the Nectarine is a cross between the Peach and something else, while it is really nothing more or less than a smooth-skinned Peach. The melting, juicy texture of the Nectarine and its delicious flavor furnishes one of the most delightful fruits for eating during the summer. Plant a few trees in your home orchard this year.

HUNTER. Large, round, yellow, freestone.

SURE CROP. Very vigorous and productive. The fruits are large, roundish, white and overlaid with very attractive red. Very pleasing flavor.

CAVALIER. New mid season, large yellow freestone.

GARDEN STATE. Large, firm, yellow freestone.

Dwarf Fruit Trees

Grow Full Size Fruit in Your Own Back Yard

DWARF APPLE TREES

Dwarf Apple Trees are in great demand by the grower with limited space. The small trees grow about 8 to 12 feet tall at maturity. Although the trees are dwarf in size, they will bear the same size fruit as the standard trees. They often start bearing the first or second year after planting. Mouth-watering fruit is produced in abundance and is easily picked. A dwarf apple tree is a beautiful addition to your landscape as an ornamental tree. Enjoy this easy-to-pick fruit in your own yard without delay. Plant several trees of different ripening dates to give you a succession of apples all season.

Important: Plant with bud union 2 inches above surface of the ground.

Red Rome Beauty

PRICE: Two year budded, 3 to 4 feet, \$2.75 each; 3 for \$7.50; 6 for \$14.40; 10 for \$22.50; 25 for \$54.00; 50 for \$100.00; 75 for \$145.00; 100 for \$185.00.

One and Two year budded, 2 to 3 ft., \$2.25 each; 3 for \$6.00; 6 for \$11.40; 10 for \$17.50; 25 for \$42.50; 50 for \$80.00; 75 for \$116.25; 100 for \$145.00.

Plant two or more varieties for proper cross-pollination.

Full size beautiful apples from "baby-size trees."

Pick handsome large apples in two years.

Plant very dwarfing apple trees 8 to 10 feet apart.

Very dwarfing apple tree 2½ years after planting—full of large size apples.

DWARF PEAR TREES

Trees bear full-sized, delicious fruit, the same as standard varieties. Often start to bear the year after planting. Always produce a full crop of large sized fruit. Ideal for the home garden and growers with limited space. Trees are very ornamental in spring with their abundance of creamy white fragrant blossoms. Plant as close as 5 feet apart. These sturdy dwarfs seldom grow more than 6 to 10 feet tall and are loaded to the ground with fruit. Easy to pick—throw away your ladders, stand on the ground and pick bushels of Pears. Trees are hardy, thrifty and heavy bearers. Varieties:

BARTLETT. Excellent flavor. The favorite summer Pear.

CLAPPS FAVORITE. Large pale yellow with red blush. Early summer.

SECKEL. Delicious, sugar sweet, small pear. Late summer.

DUCHESS. Giant size. Tender, juicy. Early fall.

Two year budded, 3 to 4 ft. trees, \$2.95 each; 3 for \$7.95; 10 for \$25.00.

One and Two year budded, 2 to 3 ft. trees, \$2.60 each; 3 for \$6.95; 10 for \$21.50.

Plant two varieties of pears for proper cross-pollination.

EAST MALLING VII—SEMI-DWARFING APPLE TREES

Semi-dwarf apple trees will bear full size fruits. Recommended for planting in small orchards and for commercial orchards. Lower production costs. Medium size trees at maturity.

Large Transparent (Lodi)
Super Red McIntosh
Triple Red Delicious
Grimes Golden

Bright Red Jonathan
Yellow Delicious (Golden)
Scarlet Red Stayman
Red Rome Beauty

PRICE: Two year budded, 3 to 4 ft., \$2.75 each; 3 for \$7.50; 6 for \$14.40; 10 for \$22.50; 25 for \$54.00; 50 for \$100.00; 75 for \$145.00; 100 for \$185.00.

One and Two year budded, 2 to 3 ft., \$2.25 each; 3 for \$6.00; 6 for \$11.40; 10 for \$17.50; 25 for \$42.50; 50 for \$80.00; 75 for \$116.25; 100 for \$145.00.

Pick your first crop of apples two years after planting.

Plant two or more varieties for proper cross-pollination.

Plant semi-dwarf apple trees 15 to 20 feet apart in commercial orchards.

For wind protection, suggest staking or bracing dwarf and semi-dwarf apple trees due to unusual large crops on very young trees.

Dwarf pear tree 2½ years after planting—loaded with fruit.

BETTER RESULTS Right From the Start with HARRISONS' HI-QUALITY APPLE TREES

Because They Are

- Absolutely true to name.
- Healthy—vigorous.
- Disease free.
- Hardy—budded fruit trees are superior to grafted.
- Properly hardened off before digging.
- Come into bearing earlier.
- Yield bigger crops of better fruits.
- Have larger roots.
- Take hold quickly in new locations.
- The best trees for less money.
- Propagated from bearing trees of selected strains.

WILLIAMS' EARLY RED

The Big Red Home or Market Apple

Just at the time when people are hungry for a fresh, new red Apple, this superb sort comes into market. In New York, Boston, Philadelphia, and other eastern cities as well as middle western and southern cities, the fruit sells as quick as it hits the market-house or dealer's store. It holds its own anywhere and has proven to be—

The Best Summer Apple

The rich bright red fruit catches the buyer's eye and is ordered at a price that yields the grower a good profit. Apple is large, with tender, crisp, white flesh, juicy, slightly tart. The trees come to bearing when quite young, producing freely and steadily. Fine for a filler or permanent tree, and being hardy, can be successfully grown in New England, where, and Canada. All orchards should include Williams Early Red.

A good pollinizer for Red Yorking and Red Rome Beauty Apple trees

SUMMER APPLES

LARGE TRANSPARENT (Lodi) A New Summer Variety

Ripens Very Early—Destined to Replace the Ever-Popular
Yellow Transparent

We believe there is a big future for this new summer Apple. Our commercial friends should lose no time in anticipating the demand for an Apple of this type.

Somewhat of a dwarf grower, bearing very young, it makes an excellent filler. The skin is a clear yellow, white flesh, of medium size. A good pollinizer.

EARLY APPLE GROWERS MAKE MORE MONEY WITH LARGE TRANSPARENT

Yes, actual profits, that's what we mean. It can be done—here's why: Yellow Transparent Apples are always first on the market and generally bring good profits when they attain proper size. Size on Yellow Transparent is hard to get, but easy on its big brother, "Large Transparent," which ripens at the same time.

Large Transparent Apples Average Up to 1 1/2 Inch Larger Than Yellow Transparent—This Means \$1.00 to \$2.00 per Bushel Extra

OTHER SUMMER APPLES

- **STARR.** Large, attractive with bright yellowish, smooth skin; sometimes marked with a faint blush and numerous russet dots; flesh yellow, fine, very tender, crisp, juicy, aromatic and of extra fine quality, bringing highest prices. Recommended to those with nearby markets, but a poor long distance shipper. Popular in Southern New Jersey.
- **MILTON.** Very handsome, McIntosh type. Fruit a beautiful pinkish red with tender, crisp, white flesh of excellent flavor. Ripens a month earlier than McIntosh Red.
- **TWENTY OUNCE.** Very large, fine quality, yellow striped red.
- **WEALTHY.** Medium to large size; round, almost solid red; flesh white or a little stained, tender, crisp, juicy, fine grained, aromatic and very good flavor. Relatively good keeper. Old variety most extensively planted in North. Tree is very hardy, withstanding unusually cold climates, vigorous, fruits at early age, bears regular and abundant crops. Tree somewhat dwarf, making a fine filler.
- **EARLY MCINTOSH.** Resembles its McIntosh parent in appearance, but is less aromatic. An attractive, uniform red color, good size, flesh white, tender, and juicy. The trees are vigorous, hardy, healthy, productive, and bear annually if thinned early and severely. The shape and framework of the tree, especially the heavy-butted branches, are like those of McIntosh. The crop ripens ten days later than that of Yellow Transparent. The fine flavor is similar to that of famous McIntosh Red.
- **RED SUMMER RAMBO.** A new earlier coloring solid red strain means much greater profits for growers everywhere. See page 17.
- **SUMMER RAMBO.** Large, splashed with red.
- **EARLY RED DUCHESS.** Highly colored early Apples bring premium prices, this bud sport colors red all over early in the summer. Excellent pollinizer for Red Gravenstein.
- **YELLOW TRANSPARENT.** Medium size greenish yellow, very heavy bearer. Most widely planted yellow variety.
- **RED GRAVENSTEIN.** See description page 21. Excellent summer apple.]

Just Get Hungry for Apples**

Harrisons' APPLE TREES

for the APPLE INDUSTRY

HARRISONS' were pioneers in selecting "Red Bud Sport" strains of apples—the late Senator Orlando Harrison started this idea 60 years ago, thus causing unprecedented discussion among commercial fruit growers and professional horticulturists.

BRILLIANT RED DELICIOUS Newest "Red Bud Sport"

The apples start taking on red color during early August or the middle of August, depending on the section of United States that the tree will be planted.

The solid red coloring at maturity is excellent and attractive, being a big improvement over the Richared, which it resembles in size and shape.

Brilliant red fruit with excellent flavor. A beautiful new apple. Similar to Royal Red Delicious. A good growing tree, 25¢ extra per tree.

AUGUST RED DELICIOUS Newest Early "Red Bud Sport"

The red color starts to show on apples during late July or early August, depending on the section of United States that the tree will be planted.

It has good full bright red color during the summer. The new variety has a much better red coloring than Starking Delicious, which it resembles in shape and size.

Similar to Red King Delicious. A good growing tree. Fruit has excellent flavor. 25¢ extra per tree.

REDBIRD DELICIOUS Newest "Spur-Type"—"Solid Red Bud Sport"

A Marvelous Discovery For Fruit Growers

A standard tree, but medium in size, of the popular "spur-type." This "mutation" being a "red bud sport" strain. The tree is about 65% to 75% of the normal full size Triple Red Delicious standard tree. The purplish-pink color will begin to show around the first of August with small inconspicuous lenticles. Will develop into full, beautiful, handsome, solid crimson, scarlet, ruby red colored apples during late August, depending on the section of the United States the tree will be planted. The excessive fruit spur formation is associated with early heavy fruiting. This "mutation" may be from Triple Red Delicious. Similar to Bisbee strain of Red Delicious, also called Starkrimson. Also similar to Chelan Red Delicious in coloring characteristics. Large size apples with gorgeous, magnificent, attractive solid red coloring without stripes, being elongated with pronounced five points on the end of the fruits, having superior excellent flavor. 25¢ extra per tree.

RED SUMMER RAMBO BIG YIELD STRAIN

A new "Red Bud Sport" strain which has very early red coloring during July and develops into a solid red colored apple. Extra large size fruits with a rich mild flavor. A tremendous bearer.

A customer in Virginia picked 1,184 bushels per acre.

A very profitable and excellent summer apple. Harrisons' strain, being this new solid red color sport, is so superior in appearance to any of its kin that in the future its culture alone should be recommended. Large, very vigorous growing hardy trees.

SPARTAN

A very attractive McIntosh type apple maturing about one week later. Firmer flesh and has excellent dessert quality. Keeps in storage several weeks longer.

Spartan is a cross between McIntosh and Albermarle Pippin (Yellow Newtown). Tree is a good grower and produces bumper crops.

Apple growers in British Columbia, Canada, consider Spartan as one of the finest apples grown and eventually expect Spartan to replace McIntosh.

JERSEYRED (N.J. 1)

Late attractive red apple producing extra large fruits. Very firm and stores exceptionally well, as does Red Rome Beauty. A cross between Gallia Beauty and White Winter Pearmain.

BRIGHT RED Stayman 201 Type It's Flaming Solid Red

BRIGHT RED STAYMAN

New red bud sport with attractive, bright brilliant, solid red color all over the apple ten to twenty days earlier than Stayman Winesap.

With 100% red color it is possible to pick and ship two weeks earlier than normal.

BRIGHT RED STAYMAN—FINE FLAVOR.

➤ GRIMES GOLDEN

Harrisons' Selected "Big Yield" Strain—Best Home Orchard Apple

Autumn, medium sized, golden yellow, tender, rich, aromatic, sub-acid, delicious, really the best flavored Apple known and a good keeper. No better variety exists for eating raw or for cooking. Tree is very hardy and one of the heaviest bearers known, producing extra large crops annually. Excellent variety for a finer quality, earlier than Winesap, Lowry, Baldwin, Cortland, Rome, Winesap, Jonathan and others. Be sure to include Grimes Golden in your orchard. **IT'S EASY TO GROW**

➤ GOLDEN DELICIOUS *It's Golden!*

A golden yellow Apple with decided "Delicious" characteristics. Yellow Delicious has a remarkably good flavor and is most popular for eating during the fall and winter months. Late September and January finds it at its best. Many people think it superior to the famous Delicious. **Yes**

A Prolific Cropper at an Early Age

The Yellow Delicious tree is very fruitful, hardy, and a vigorous grower. It is well known for its heavy bearing of fruit at a very early age. You can depend on a good yield of ripened fruit each year. Excellent pollenizer for all varieties.

➤ **STAYMAN WINESAP** Big Yield Strain. With but a slight tinge of red, this is a valuable and strain of Stayman Winesap is hardy. This strain yields bumper crops year after year. It is easy to pick, bright red and gets heavily so. Red colored when allowed to stay on tree until fully ripe. This is an improved strain and is preferred by many growers in the East. Tested and time proven by thousands of growers.

➤ McINTOSH RED

Improved Type—Heavy Yielding Strain Preferred by Many Growers in the North.

Until the discovery of our New Super Red McIntosh our improved McIntosh Red was the best strain of McIntosh available. It colors so red when climatic and soil conditions allow it to remain on the trees until it is mature. This heavy yielding strain is much superior to any strain of McIntosh, especially the dull striped kinds. If you do not have trouble getting sufficient color then we recommend you planting this time-proven, heavy yielding strain. McIntosh Red is very hardy and produces bumper crops each year. Generally considered as the best flavored Apple grown. Recommended for home or commercial orchard plantings.

YELLOW DELICIOUS (GOLDEN)

Big Crops—One of the Best Golden Apples

Harrisons' Maryland Grown Apple Trees
are the Finest Quality in the World

➤ **YORK IMPERIAL.** A large red apple, a little lopsided, but keeps all winter. A heavy bearer and good quality.

➤ **SMOKEHOUSE.** Large Apples of superfine flavor, excellent for eating, yellowish green mottled with dull red and with many russet dots; flesh firm, crisp, juicy and aromatic. Tree large, vigorous and reliably productive.

➤ **WINESAP** An Apple favorite in Virginia. Sometimes called Old Winesap and Virginia Winesap. Medium size, oblong, smooth, and a fine dark red—one of the best red colored Apples grown; flesh yellow, crisp, tender, very juicy, aromatic, firm and of excellent flavor. Very long keeper and considered the best cold storage variety keeping until July. Strong grower, comes into bearing early. Our strain produces bumper crops of the larger sized Apples with plenty of color.

➤ **MAMMOTH BLACK TWIG (Paragon).** Extra large in size and round, skin smooth, yellowish covered with deep red, the general effect being dark red, flesh tender, tinged with yellow, crisp, sub-acid, aromatic, fine flavor, of excellent quality, long keeper of great value. An important commercial variety in the East. Tree is vigorous and healthy, yields big crops. Plant Delicious or Jonathan as a pollenizer.

➤ **NORTHWESTERN GREENING.** Large, round, greenish yellow; juicy, firm, good quality, splendid keeper, ships well. Attractive Apple when packed in bushels demands good prices, excellent baking Apple. Should not be planted extensively because crops are not so certain, due to blossoming early. Trees are extremely hardy, vigorous, and bear very young.

➤ **RHODE ISLAND GREENING.** The Popular Northern Apple. Large, greenish yellow; flesh crisp, juicy, quite acid, firm, fine grained, tender, and of very fine flavor and quality. An excellent keeper, a popular barrel Apple, brings good prices. Generally planted in New England, New York, Michigan and Canada, but not advisable to plant south of the Mason-Dixon line.

➤ **ROME BEAUTY.** Large, round, red, flavor and quality above average.

➤ **RED LOWRY.** Red bud sport strain, identical with its parent Lowry in all respects with the exception that it has very much higher red color and when matured full red color. It can be picked 2 to 3 weeks earlier than Lowry, due to its earliness in season and color. Interplant a few Grimes Golden as a pollenizer.

NERO

Late September, deep red, handsome shading, medium size, of good quality and excellent flavor. One of the longest keepers. Extra-heavy bearer.

WIDARED

First to be named of the many crosses made at the Experimental Stations at Moscow and at Parma, Idaho. A CROSS BETWEEN WAGNER AND JONATHAN. Its season is with or a little later than Jonathan. Fruits are medium to large, stems medium long, slender, cavity broad, deep, cavity small, basin shallow. Strikingly beautiful bright red color. Skin smooth, medium thick, waxy, dots sparse, inconspicuous, rich yellow underneath. Fruits hold form as well as Rome when baking. Creamy white, smooth textured flesh. Tree form resembles Jonathan, more upright, spreading, seems rather resistant to blight. A regular bearer. Trees limited for to 1934.

➤ **DOUGLASS** A medium sized or beautiful tree, bright red—well over apples in the fall. Glistening white blossoms in the spring. Best apple for jelly as it rates highest in pectin. Delicious to eat, whole or in pieces. Needs very little sugar. Extremely hardy everywhere.

OTHER GOOD APPLES

➤ **DOUBLE RED BALDWIN.** A new dress for this old reliable variety. Solid deep red color, much earlier than ordinary Baldwin. The color makes it sell better. This new strain will bring new profits to the grower of Baldwins. Late fall.

➤ **CORTLAND.** A new variety resulting from cross pollenization of McIntosh Red and Ben Davis, and inheriting the good qualities of each parent. Beautiful red Apple, approximately the same size and fine flavor of the McIntosh, but ripens 3 weeks or a month later. Good keeper.

➤ **CALLIA BEAUTY.** A Rome Beauty type of Apple identical in every respect, except its earlier coloring qualities, recommended for commercial planting. Harrisons have the genuine original strain of Callia Beauty.

➤ **JONATHAN.** Medium to large, red, juicy. Good keeper and shipper.

➤ **KENDALL.** A most attractive McIntosh strain—new variety.

➤ **TURLEY.** A new variety of Winesap which it somewhat resembles. Fruit rounded conical in shape, much larger than the Winesap, smoother skinned and deeper and richer in color, juicy and rich flavor. Tree very hardy and comes into bearing early.

CRAB APPLES

Priced on page 17
Double Purpose—An Ornamental and Fruit Tree Combined

➤ **HYSLOP.** Deep crimson, large size, sub-acid and of good quality. Fine for all kinds of preserving, canning, etc., and good to eat fresh. Tree handsome.

> SCARLET RED STAYMAN BRILLIANT COLOR

We offer to the public the greatest strain of *Stayman Winesap* ever discovered. It is a true bud sport found in a *Stayman Winesap* orchard. *Scarlet Red Stayman* takes on bright red color weeks earlier than ordinary *Stayman*. Its ripening date is the same but can be picked earlier if desired.

A Ready Market at Top Prices

Scarlet Red Stayman is the best general purpose Apple for planting in the East. Its solid scarlet-red color and its bright attractive finish causes it to command highest market prices. The fruit is large and it produces bumper crops each year.

> SOLID RED WINESAP

Old Winesap generally has plenty of color when planted in most sections, but for those growers who want a more solid red-colored *Winesap*, we recommend our new strain.

THE APPALACHIAN WINNER RED YORKING

U. S. Plant Patent No. 125

The *Red Yorking* is a 'bud sport', being a mutation of the famous *York Imperial*. This 'bud sport' originated on a tree grown with other *York Imperial* trees, in *Harrisons' Nurseries* and later sold to Mr. W. H. Allison, near Shippenburg, Penna., for use in planting a large orchard about 40 years ago.

RED YORKING—Big Crops

RED VARIETIES

Flavored Apples

HOME OR COMMERCIAL ORCHARDS

SUPER RED McINTOSH
Superb Flavor

RED ROME BEAUTY
Quality and Appearance

RED SPY—Bears Crisp, Juicy Apples

RED ROME BEAUTY

An improved Rome Beauty, identical in vigor and production. Color of fruit much brighter and solid red. Produces much higher percentage of fancy Apples and also superior in quality to the ordinary strain of Rome Beauty. Red Rome Beauty is renowned for bearing at a very early age, producing bumper crops of large size Apples. The tree is a vigorous, strong grower, exceedingly hardy. Pacific Coast strain. Has always been very popular.

NEW STRAINS OF RED ROME

Can supply two new additional red bud sport strains known as C. and O. Red Rome also C. and O. Red Rome number 262

SUPER RED McINTOSH

A new strain of McIntosh Red that starts coloring earlier and produces a larger percentage of extra fancy fruits. Super-Red McIntosh, when allowed to mature on the trees, is slightly darker in color than our regular improved McIntosh Red. Has all the best qualities of ordinary McIntosh and will mean larger profits for growers who have been unable to get sufficient color. McIntosh has been the favorite in the North; this new strain extends the planting area farther South. The most highly colored solid red strain available, regardless of price. We have some exceptionally good one-year trees and fine two-year trees to offer this season. Plant McIntosh strain of Apples for big profits, equally as good in home orchards as it is commercially.

RED SPY

A new "bud sport" from New England. Identical with the ordinary Northern Spy in fruiting habit. Extra large size fruit, strong, vigorous, hardy trees. Comes into bearing earlier than the ordinary strain. Colors early, nearly every Apple being solid red in color. We recommend it for commercial and home plantings in northern states.

BRIGHT RED JONATHAN

We searched the country over to find a strain of Jonathan that had more color than our selected Big Yield Strain of Jonathan. After thousands of miles of travel inspecting all of the new strains of this famous variety we found the one we had been looking for. It colors solid red several days earlier, otherwise it is identical with ordinary Jonathan. Growers who want more, deeper colored apples will find our Bright Red Jonathan the best colored strain obtainable.

RED GRAVENSTEIN

Here is the Apple that has been overlooked by eastern growers. Old-fashioned Gravensteins have been grown in tremendous volume during the past twenty-five years, mostly in California, a few in the Eastern States. The old strain lacks the color to make it sell. Our new Red Gravenstein colors a solid bright red long before it is ripe. The quality of Red Gravenstein is extra good for an early Apple and its ability to carry to distant markets, even after it gets solid red, makes it command the highest prices

For home, for canning, for market, the best. Ripens during summer.

A golden colored Pear, with a red cheek on most specimens. Bartlett mellows and is excellent for eating very early in the fall, yet when picked a week before it is ripe and properly stored, will keep till late. Flavor delicious and musky, flesh buttery, rich and juicy. One of the finest Pears that grows to eat raw. A mingling of the flavor of Bartlett Pear and Quince gives about the finest taste of any food this world's folks have. Bartlett trees bear early, produce enormous crops, and are not nearly so subject to damage by insects and disease as some other sorts. The trees do especially well with high culture.

Fancy Bartletts Bring Highest Prices

Bartlett Pears always sell on the markets even when other sorts are not in great demand. The fruit is so handsome and appealing that it pays to pack it in fancy containers. Bushels or bushel boxes are best adapted. The fruit ought to be sorted and graded, wrapped in tissue paper, and arranged in the container practically the same way that you pack Apples. Pears are sometimes packed in Peach carriers, and sell to good advantage. Plain fruit can be sold without wrapping in small baskets or boxes. One or two Bartlett Pear trees in the city yard will furnish a considerable amount of fruit; a half dozen will supply the family with fresh fruit and a surplus for preserving.

KIEFFER

SURE CROPPER—EASY TO GROW

Of all the Pears, Kieffer is the most easily grown. Trees are vigorous, exceptionally hardy and thrive on varied soils in any climate. Kieffer and Koonce are the only Pears that can be successfully grown in such southern states as Alabama, Mississippi, Louisiana, etc., and yet it is the leading commercial Pear in Canada. Kieffer is blight-resistant, and can be successfully planted in large orchards.

This fruit is large to very large size; skin yellow, with light vermillion cheek; flesh yellowish white, very juicy. Noted for being a long time keeper. Most popular canning Pear.

- **BEURRE BOSCH.** Large size, fine quality, brings highest market price. Late.
- **BEURRE D'ANJOU.** Large, green in color, somewhat yellow when ripe, buttery, melting, rich, vinous, good flavor. Tree vigorous, hardy, prolific bearer. Very late.
- **CLAPP'S FAVORITE.** Large size, hardy and very productive. Thrives where other varieties fail. Very early.
- **DOUGLAS.** Very resistant to blight. A winter Pear, with a golden yellow skin and a faint blush on the cheek. Bears early.
- **DUCHESS.** Very large, dull greenish yellow. Tree somewhat dwarf but a dependable bearer. Late.

QUINCE

ORANGE. Late, large, bright yellow, excellent flavor, productive and rarely fails to produce a crop. Best canning variety. We offer the Wayne County (New York) strain.

Quince Tree Prices:

Each
3 to 4 ft. \$2.50
4 to 5 ft. \$3.50

DWARF PEARS

These attractive small trees require very little space, produce big delicious fruit, and often bear year after planting. Plant two varieties for cross pollination.

Varieties available:

Bartlett
Dutchess
Clapp's Favorite
Seckel

Price: 2 yr., 3-4 ft., \$2.95 each; 3 for \$7.95.

➤ **KOONCE.** One of the earliest Pears, free from blight, does not rot at the core like many early Pears. Fruit is yellow, medium to large, delightful flavor. Very productive. Extra good for southern states.

➤ **SECKEL.** A beautiful and delicious little Pear. One of the richest and highest flavored Pears grown. Tree dwarf, bears prolific crops. Late.

➤ **WORDEN SECKEL.** A seedling of Seckel. Superior in size and color. Mid-season.

ARE HARDY IN
ANY CLIMATE

NEW GIANT Cultivated Blueberries

- Profitable to Grow
- Delicious Berries
- Very Ornamental

Once Planted Lasts a Lifetime

Blueberries are not only the largest money makers of all time commercially, but are also one of the easiest fruits to grow. The berries bring up to 75c. per quart—\$400.00 per acre the third year. They are exquisitely mild, sweet and delicious, and bring highest prices on the market. The demand for Blueberries is practically unlimited. A planting lasts a lifetime with proper care and the plants will pay for themselves their first crop. A few bushes planted in the shrub border and in the garden will be sufficient to supply you with berries for years.

New!

Blueberries—Easy to Grow

Set the bushes 5 by 7 feet apart in moist, acid soil. If your soil is sweet, it may be made acid by mixing with it a little quantity of acid peat, rotted leaves and pine needles, or similar material. Fruit ripens over a period of several weeks. Plant two or more varieties so as to insure proper pollenization.

Very Ornamental

As an ornamental shrub the Blueberry cannot be surpassed. Full of lovely pink blooms, which open to bell-shaped, white flowers in June. Plants are compact, low growing, having waxy green leaves which turn red during the fall. Twigs are reddish brown and very showy during the winter.

IMPROVED Varieties

PRICES ON THESE NEW VARIETIES: 2 year 12 to 18 in. br. \$1.95 each; 4 for \$6.95.

➤ **EARLIBLUE.** Originated in Weymouth, N. J., by the U. S. D. A. and the N. J. Experiment Station. Earliblue is a cross of Stanley x Weymouth. Fruit clusters medium size; berries oblate; light blue; very firm; subacid; flavor very good. Earliblue ripens early with Weymouth and June, the bushes are upright, very vigorous, well shaped and good producers.

➤ **IVANHOE.** Early. Fruit are large, firm, and have a fine flavor. They are easy to pick and have a good fruit scar. Plants are especially vigorous and are very easy to grow.

➤ **BLUERAY.** Early mid-season. Just named in 1955 this wonderful new blueberry has many outstanding features. Its berries are very large and of high flavor. The clusters are tight and very attractive. You should certainly try some plants of Blueray.

➤ **BLUECROP.** Originated in Weymouth, N. J., by the U. S. D. A. and the N. J. Experiment Station. Bluecrop is a cross of Jersey x Pioneer with Stanley x June. Fruit clusters of Bluecrop are large, berries that are roundish—oblate; color very light blue; very firm; subacid; flavor good. Bluecrop ripens in midseason with Concord, Pioneer and Atlantic. Bush; upright and vigorous; very consistent producer.

➤ **BERKELEY.** One of the newer types of blueberries originating in Weymouth, N. J., by the U. S. D. A. and the N. J. Experiment Station. Berkeley is a cross between Stanley, Jersey and Pioneer. Fruit is light blue color and considered one of the largest blueberries yet introduced. Berries are not subject to crack, ripen about a week after Stanley. Plants are very productive.

➤ **HERBERT.** Originated in Weymouth, N. J., by the U. S. D. A. and the N. J. Experiment Station. Herbert results from crosses of Stanley with Jersey and Pioneer. Fruit clusters are loose; fruit ripens about the same time as Jersey and Dixi, earlier than Coville but later than Berkeley. Berries of Herbert are large and carry their size well through ripening season; firm; resistant to cracking; color about the same as Jersey, Rubel and Dixi; flavor is equal to the best varieties; hangs well on bush. Bushes flower late, are thrifty growers and consistently productive.

➤ **COVILLE.** Extra late. Fruit are large and very attractive. Before fully ripened they are quite tart but later develop excellent flavor. A very important feature of Coville is its lateness which extends the blueberry season for a full month after the early varieties. Plants are very vigorous and attractive.

BLUEBERRIES—Ornamental as well as fruitful
Jumbo Size—Bear First Year Planted

SPECIAL JUMBO SIZE BLUEBERRY PLANTS

Have already fruited in the nursery. Ready to bear big crops of luscious berries on your own grounds and are as easily grown as a shrub or Rose bush. You can pick delicious berries the first season planted, and each year they will produce a larger crop with very little attention. We only have a few hundred of these Jumbo sized plants to offer. Can supply in the following varieties only: June, Rancocas, Concord, Stanley, Rubel, and Jersey.

Prices: Jumbo size 4-year-old, 2 to 3 ft.,
\$2.50 each; 3 for \$6.75; 10 for \$20.00

LEADING BLUEBERRIES

Listed in Order
of Ripening

- **WEYMOUTH (Earliest of All).** Very popular commercially because it is first to ripen and makes entire crop for early market prices. Dark blue, medium berries of fair flavor.
- **JUNE.** Plants seldom exceed three feet in height and make a broad, low bush. The color of the new growth in winter is a light red over olive. The large berries have a delicious sub-acid flavor.
- **RANCOCAS.** The bush of slender, vigorous, upright habit rarely surpasses five feet in height. The winter twigs are a dark red. The berries are somewhat larger than those of Rubel and begin to ripen several days earlier.
- **CONCORD.** The bush is of upright habit and at maturity exceeds six feet in height. The young growth is bright red in winter. The berries are large, frequently reaching three-quarters of an inch in diameter. They usually ripen a few days earlier than Rubel and are fine in flavor and appearance.
- **STANLEY.** Tall, vigorous bush with large, thick, shiny leaves. Good producer of large berries, considered best flavored of all varieties.
- **RUBEL.** A vigorous, productive variety. Well developed bushes stand six feet high and the winter color of the young wood is a rich red. The large berries of fine color are usually ready to pick the first week in July. Best commercial variety.
- **JERSEY.** The bush is of vigorous habit and grows very large. The winter color of the young growth is a light red over golden brown. The berries are the largest of any here listed, light blue, and ripen about the same time as Rubel.

A WHOLE ORCHARD

FOR ONLY \$3.25

Five Varieties of Apples for Fresh Eating from Late June Until Early November produced on the same tree

Here's the opportunity for those with limited space to have five mighty desirable varieties of Apples, all budded on one tree for a little more than the cost of one tree. Requires only 20 ft. space when fully grown. Each tree is budded to Large Transparent for first summer variety, Williams Early Red, Red Gravenstein, Triple Red Delicious and Yellow Delicious for autumn varieties, Scarlet Red Stayman and Red Rome Beauty for winter varieties.

Budded to 7 varieties, however, guaranteed to have 5 or more
2 year, 4 to 5 feet, well branched at \$3.25 each

2 year, 5 to 6 feet, extra well branched with good heads, at \$4.50 each

Jumbo Size, 3 year, 6 to 8 feet, extra well and heavily branched with beautiful heads at \$5.40. each.

Fruit Trees are Too Large for Parcel Post Shipment-We Recommend Express.

If Your Space Is Limited

Plant one of these novel trees. You will have a variety of Apples maturing over a long season. Desirable as an ornamental and shade tree, as well as for its fruit.

Grow Your Own DELICIOUS! NUTRITIOUS

ASPARAGUS

It's Easy with

Harrisons' "Big Yield Strain"

MARY WASHINGTON

Highly Profitable and Easily Grown

Being the first vegetable to come in the spring it always brings a high price on the markets. Stalks being delicious and very healthful, every garden should have a generous supply and when properly set and cared for will last a lifetime.

New Gigantic Red MacDonald Rhubarb

If you want something different, something delicious in garden fruits, then plant some of this grand new MacDonald Rhubarb.

Stalks are of giant size on mature plants, and a rich rosy red in color. This beautiful color carries through the stalk. Sauce made from it has the red color of a dish of Strawberries. Flavor is mild and pleasing. This new Rhubarb does **not** send up seed stalks and never becomes tough or stringy. Just cut in small chunks and cook. Do **not** remove the tender skin; it cooks right up with the stalk.

Heavy plants: \$1.00 each; 6 for \$5.40.

Grow Finer Flavored Berries

With **Harrisons' ^{Select Certified} Raspberry Plants**

LATHAM

WORLD'S LEADING RASPBERRY

The sensational yields of this variety have attracted the attention of growers everywhere, and all those who have given it a trial are praising the many unusual features they have found in Latham. After thoroughly testing Latham we find it a remarkable variety in every respect you will be both delighted and surprised after giving it a trial.

Large Berries— Tremendously Productive

Latham is a tall, vigorous grower, the canes are extra heavy, well able to support the load of fruit. The foliage is healthy, dark green, tough and leathery, highly resistant to insects. Latham ripens with Cuthbert, covers a longer fruiting season. The berries are beauties and will cause a sensation wherever they are shown. Many are over an inch in diameter and they hold this size to the end of the season. Color dark, rich red.

A Blue Ribbon Winner for the Home and Commercial Grower. It simply cannot be equalled.

CUMBERLAND

The Most Popular Black Raspberry

CUMBERLAND

Midseason to late. This is the most popular Blackcap of the present time, because of its great size, firmness, and productiveness. The fruit is the largest of the Raspberry family, and is of such handsome appearance that it is sure to bring the top prices on the market.

A BIG CROP EVERY YEAR

Cumberland has never been known to fail to produce a big crop every year. This variety is perfectly hardy and tremendously productive, the bushes are vigorous, upright and healthy. Berries are glossy black in color, not equalled by any other variety in quality, flavor and appearance. It's good to eat and good to sell.

Here's Another Extra Good Blackcap The Mammoth New MORRISON

This brand new variety has been a sensation wherever planted. Mammoth sized berries, glistening jet-black color, rich flavor, fewer seeds, heavy producer. The thrifty, strong, hardy plants are heavily rooted and disease resistant. Easy to grow, excellent for canning, eating fresh, freezing. Ripens slightly later than Cumberland.

INCREASE YOUR PROFITS WITH

HARRISONS' BIG YIELD GRAPE Vines

BEAR BETTER CROPS
OF BETTER FRUIT.

Harrison Brothers Selected Varieties Grapes

AGAWAM. Red. Midseason. Large, thick skin, aromatic flavor. Vines strong, rank grower. Hardy and productive. Ripens with Concord.

CACO. Red. Midseason. Fruit is very large and handsome. A rich wine-red color. Not a very rank grower and a sh. bearer.

CATAWBA. Red. Very late. Large. Flesh pulpy with rich vinous flavor. Quality good. A very desirable variety.

PORTLAND. Holds first place among grapes as an early green variety. Vine very vigorous, hardy and healthy. Bunches and berries larger than any other green grape. Very fine quality.

FREDONIA. Blue. Very early. Originated by New York Experimental Station. The bunch and berry are large, with excellent, juicy, delicious flavor. Vigorous and productive. Ripens fully ten days before Moore's Early.

NIAGARA. White. Midseason. Best of the standard light colored Grapes. Bunches of large greenish white berries change to pale yellow when fully ripe. A rank grower and very productive. Popular with vineyardists and home gardeners in the North, as well as the South.

WORDEN. Blue. This excellent Grape is as hardy, healthy, vigorous and productive as Concord, of which it is a seedling, but better in quality. It is sweeter, larger in bunch and berry. Several days earlier. Valuable for garden and vineyard.

QUINCE

ALTHEA (Rose of Sharon)

ALTHEA or ROSE OF SHARON (*Hibiscus Syriacus*). The double and single flowers are formed in varying colors. We can supply double red and purple.

BUDDLEIA MAGNIFICA. New and undoubtedly the finest of all the summer-flowering Butterfly bushes. Large bright lavender panicles. Flowers do not sunburn as do other varieties. Foliage heavy rich dark green. Very hardy.

DEUTZIA, PRIDE OF ROCHESTER. Double white flowers, slightly tinged with rose, appear in mid-June.

DOGWOOD, RED-BRANCHED (*Cornus Alba Sibirica*). Bright red bark, white flowers, blue fruit; rapid grower; beautiful winter effect.

GOLDEN BELL (*Forsythia*). Vigorous, upright grower; profusion of yellow flowers in April. One of the best early blooming shrubs.

HONEYSUCKLE, BUSH (*Lonicera Morrowi*). Early white flowers in June, followed by red berries.

PINK MAGNOLIA

(*Magnolia Soulangeana*)

Our most outstanding early spring blooming plant. Large pink blooms. Grows in bush or tree form. Every garden should have one or two of these remarkable plants.

Prices—Strong Field Grown Plants—Each \$2.75; 2 for \$4.90.

SYRINGA, SWEET MOCK ORANGE or GARLAND (*Philadelphus Coronarius*). Of upright habit, and produces in June a wealth of white, fragrant flowers.

SWEET-SCENTED SHRUB (*Calycanthus Floridus*). Hardy native with many double, chocolate-colored flowers in May. Flowers, leaves and wood have a spicy fragrance.

TAMARIX, AFRICAN (*Tamarix Africana*). Feathery gray-green foliage; very showy.

TARTARIAN HONEYSUCKLE (*Lonicera Tatarica*). Very attractive in blossom, producing an abundance of flowers followed by red fruit. We offer pink and white varieties.

WEIGELA, PINK (*Weigela Rosea*). The most popular Weigela sold today. Its delicate pink, bell-shaped flowers are borne in great profusion along arching branches.

ROYAL BLUE HYDRANGAEA

(*Hydrangea Otakss*)

Old favorite southern Hydrangean. When winters are severe we suggest heeling in. Large balls of blue flowers and attractive large leaves. Color depends on acidity of soil. Field-grown plants, \$1.50 each; 2 for \$2.80.

MAKE YOUR HOME A SHOW PLACE WITH HARRISONS' HI-QUALITY ORNAMENTAL SHRUBS

NORTHERN STRAIN

CHINESE ELM

Grows 20 Feet in Four Years

Because of its beauty and extremely rapid growth, Chinese Elm has become a leading shade tree of America. It is planted in every state, and like its native country of Korea, withstands intense cold and extreme heat. It makes excellent shade in five short years, averaging about 5 feet growth annually. It is by far the fastest growing hard-wooded shade tree. It resembles the American Elm except that leaves are smaller, with the gracefulness of a Cut-Leaf Birch. **Prices: 3 to 4 ft., \$.95 each; 4 to 5 feet, \$1.45 each; 5 to 6 ft., \$1.95 each; 6 to 8 ft., \$3.00 each.**

AMERICAN PLANE

(*Platanus Americana*)

Very attractive, well known, rapid growing shade tree. Foliage large and maple-like. **Prices: 4 to 5 ft., \$1.75 each; 5 to 6 ft., \$2.75 each; 6 to 8 ft., \$4.25 each; 8 to 10 ft., \$6.00 each; 10 to 12 ft., \$8.00 each.**

AMERICAN ELM

(*Ulmus americana*). A noble native tree of great size, wide spreading, gracefully curving branches, growing up in a form like the outline of long-stemmed flowers, in a tall vase. **Prices: 4 to 5 ft., \$1.45 each; 5 to 6 ft., \$1.95 each; 6 to 8 ft., \$3.00 each; 8 to 10 ft., \$5.00 each; 10 to 12 ft., \$7.00 each.**

LOMBARDY POPULAR

A tall, spirelike tree used for screens and formal plantings. It is fast growing, distinctly ornamental and beautiful. **Prices: 5 to 6 ft., \$1.25 each; 6 to 8 ft., \$1.95 each; 8 to 10 ft., \$2.90 each.**

SILVER MAPLE

Rapid growing. **Prices: 3 to 4 ft., \$.95 each; 4 to 5 ft., \$1.45 each; 5 to 6 ft., \$2.00 each; 6 to 8 ft., \$3.25 each; 8 to 10 ft., \$5.00 each; 10 to 12 ft., \$7.50 each.**

CHINESE ELM—Quickest Growing Tree in the World

WEeping WILLOW

A rapid growing, hardy tree, thriving in any moist soil. The Willows are valuable and interesting subjects on account of their graceful aspect. **Prices: 5 to 6 ft., \$2.50 each; 6 to 8 ft., \$3.25 each.**

NORWAY MAPLE

Typical Maple leaves, large and bright green, fading to gold in the fall. Trunk and branches are sturdy and strong, lending an effect of ruggedness. **Price: 6 to 8 ft., \$4.75 each.**

ORIENTAL PLANE
The Famous Light Bark Tree

ORIENTAL PLANE

(*Platanus Orientalis*)

A rapid, upright, clean growing shade tree, long lived, beautiful dense foliage. A superb tree of gigantic proportions, which is very hardy. Won high popularity in recent years due to its many merits, which have made it the most useful and the most sought for shade tree for lawns, parks, streets and highway plantings. **Prices: 4 to 5 ft., \$1.75 each; 5 to 6 ft., \$2.75 each; 6 to 8 ft., \$4.25 each; 8 to 10 ft., \$6.00 each; 10 to 12 ft., \$8.00 each.**

CHINESE CHESTNUTS

**Now You Can Grow Chestnuts!
Blight-Resistant Chestnut Trees**

Only two years from this fall, right in your own grounds, you can pick big, fat, tasty Chestnuts from the trees you plant this year! Remember gathering Chestnuts in the good old days—haven't you felt sorry for your children because they couldn't? The devastating blight that stripped our forests of the native Chestnut was an American tragedy! Now these hardy, blight-resistant Chestnut trees will bring them back. More than that, you need not wait 15 to 20 years for nuts—they'll bear year after year!

Plant in abundance Harrison's strain of Chinese Chestnut trees.

PRICES: 2 to 3 ft., \$2.50 each.

AMERICAN FILBERT (Hazel Nut)

AMERICAN FILBERT

(Hazel Nut)

Old family favorite. Small, attractive bush, yielding abundant crops of tasty, round nuts. Bears very young.

PRICES: 2 to 3 ft., \$2.00 each.

ENGLISH WALNUT

(*Juglans Regia*)

Thin shelled, large, delicious nuts, producing heavy crops and demanding good prices. The most popular Walnut grown.

PRICES: 2 to 3 ft., \$2.75 each.

CHINESE CHESTNUTS

ENGLISH WALNUT

AZALEA—A Miracle of Loveliness

AZALEA HINODEGIRI

Deep Coral-Pink Flowers

Azalea Hinodegiri is a dwarf grower with ever-green foliage. In the spring it produces a profusion of deep coral colored blossoms, completely hiding the foliage. Ideally suited for planting around the foundation of homes or adding color in front of ever-greens. Grows well in the shade or sunlight.

AZALEA MACRANTHA

Large, single, salmon-red flowers. Late bloomer with dark green, glossy leaves that remain on the plant all winter. Same prices as Azalea hinodegiri.

FLAME. Bright flame red, suffused with copper

CORAL BELLS. Shell-pink, shading deeper at center

HINO-CRIMSON. Brilliant red. Good. Does not fade

SALMON BEAUTY. Large salmon-pink flowers.

The Colorful PEONIES

THEY RIVAL THE ROSE

Once planted they last for years. There should be several planted in every yard. Their large, bright colored flowers during May and June furnish an abundance of flowers for the home. Can supply the following colors:

WHITE PINK RED

State or desired
Prices: \$1.00 each; 3 for \$2.70; 10 for \$8.00.

JAPANESE HOLLY (Ilex crenata). A much-branched ever-green shrub with oval crenate leaves. Clusters of black berries form during the fall. Makes a splendid plant.

PRICE: 8 TO 10 INCHES \$1.00 EACH.

LIGUSTRUM lucidum compactum

Thick, leathery, wax-like, dark green foliage, upright, dense grower.

8 TO 10 INCHES, EACH \$1.00

KOREAN BOX

Much faster grower than other boxwood types.

8 TO 10 INCHES, EACH \$1.00

AUCUBA—Gold Dust Plant

Large green leaf, mottled with bright golden spots. Green bark. Large clumps of bright red berries on older plants. One of the very best plants for shady places. 8 to 10 inches \$1.00 each; 10 to 12 inches \$1.25 each.

GORGEOUS LILACS

Lilacs are marvels of beauty and elegance. They are one of the first plants to bloom in the spring. Perfectly hardy in any locality. We can supply the following colors: White, Purple, Pink and Blue. State color desired. Prices: Field-grown plants, \$1.50 each; 2 for \$2.80; 10 for \$13.00.

All evergreens are shipped with Moss on the Roots.

THE FAMOUS CALIFORNIA PRIVET—The Best Low Cost Hedge—Grown by Harrison Brothers, Berlin, Maryland

California Privet is the Leading Low Cost Hedge Plant

CALIFORNIA PRIVET

(*Ligustrum ovalifolium*)

This is the universal hedge in the East, a fact proving that Privet has greater merit under ordinary conditions for this purpose than any other plant. For live fences at village, town and country homes it is the very best of all materials. On public grounds of all kinds, parks and cemeteries, along roads and paths, on factory grounds, and on newly subdivided areas near towns, nothing else can be used in its place, and in this place it is indispensable. It is the best of all hardy hedge plants. Can be easily kept at any height desired; has glossy, deep green leaves, and holds them until late fall. Its strong, quick, upright growth makes it useful for screening out unsightly objects.

SPIRAEA VAN HOUTTEI
Always Makes an Attractive Hedge

GREEN BARBERRY

(*Berberis Thunbergi*)

The best low dense hedge plant grown. Its abundant, small light green leaves, which turn to rich colors in autumn, and its wealth of scarlet berries make it very attractive. Extremely hardy and requires but little pruning. Ornamental and graceful the whole year.

SPIRAEA VAN HOUTTEI

This grand shrub has done more to beautify the homes of America than any other variety. It is valuable as a specimen, in groups, in border planting and for hedges. The branches are slender, drooping, covered with white flowers in April or early May. It grows in any place either in full sunlight or partial shade. Disease resistant, hardy, thrives under adverse conditions. Ultimate height 6 to 8 feet but can be kept lower by trimming. The most popular shrub. We have an extra fine supply of first class plants this year and are pricing them especially low.

BUSH ARBUTUS

(*Abelia Grandiflora*)

By Far the Best Evergreen Shrub

One of our beautiful, popular and satisfactory broad-leaved evergreens. The graceful, drooping stems and branches are covered with dark, glossy leaves which in winter assume a metallic sheen. From the middle of June until frost, this plant produces an immense quantity of tubular-shaped white flowers tinged with pink, about an inch long, which are borne in clusters. Good for shady locations.

RED-LEAVED BARBERRY

(*Berberis Thunbergi Atropurpurea*)

A highly important introduction among shrubs, giving us for the first time a practical, easily grown shrub of medium height, with good, distinctly red foliage. This must prove a boon to all types of landscaping, where studied contrasts are to be worked out with the shrub foliage depended on for color. Red berries during winter.

Harrisons' HARDY VINES

NATURE'S DRAPERIES

BOSTON or JAPANESE IVY (*Ampelopsis Veitchii*).

A popular climber, clinging firmly to brick, stone or other material; deep, glossy green, ivy-shaped foliage which turns to cream and gold color in autumn. Price: \$1.00 each.

CHINESE WISTARIA. A rampant growing, clinging vine. Blue flowers in large, drooping clusters during May and June. Price: \$1.25 each.

ENGLISH IVY (*Hedera Helix*). The most popular evergreen vine; large, deep green, glossy foliage. Excellent for covering walls. Useful for shady locations. Price: \$1.00 each.

HALL'S HONEYSUCKLE. Deep glossy green foliage; fragrant flowers from July to fall. Price: \$1.00 each.

SWEET AUTUMN CLEMATIS (*Clematis paniculata*). A splendid climber for covering porches and trellises. Flowers snowy white, produced in immense quantities during late summer and autumn. Price: \$1.00 each.

SILVER LACE VINE (*Polygonum Auberti*). Will rapidly grow 20 feet or more. Forms cloud of lacy, misty white, shot with tints of cream and pale rose. Green foliage, lightly bronzed at tips. Price: \$1.25 each.

YOU CAN PLACE YOUR ORDER WITH US WITH COMPLETE CONFIDENCE. It is our earnest desire that each and every one of our customers be fully satisfied in their dealings with us. If you are not and feel that it is our fault in any way, please write to us. No transaction is complete unless you are completely satisfied.

Note: Any money overpaid by customer will be promptly refunded.

GREEN BARBERRY—Green in the summer, turning to a brilliant coppery red. A protection against small animals, because of the sharp thorns.

HARRISONS' DECORATIVE EVERGREENS

Our Splendid Trees Embellish the Grounds of Beautiful Homes the Country Over

GOLDEN RETINOSPORA

SPREADING YEW

SPREADING YEW

The beautiful Yew of moderate bushy growth, usually grows wider than it does tall, starts branching from the bottom, developing into a bush form. The spreading branches are densely clothed with short leaves of dull green. It is the most attractive spreading evergreen, will grow in semi-shady locations. Hardest of all Yews. By trimming the side branches the plant can be made to grow semi-upright and likewise by trimming the top branches the plant can be made to develop lower to the ground. Can also be trimmed into globe shape. Prices: 12 to 15 inch \$2.50 each. 8 TO 10 INCHES. \$1.00

GOLDEN RETINOSPORA

A handsome golden colored evergreen that is admired by all. Its pleasing shade provides the right amount of contrast when it is planted along with other evergreens along its side or back of it. Feathery, fernlike foliage can be kept trimmed to any size. No home foundation plantings are complete without this remarkable healthy evergreen. Price: 12 to 15 inches \$2.00.

COMPACT GLOBULAR ARBOR-VITAE

Natural compact, globe-shaped, dark green foliage. The ideal low growing plant for massing against the taller evergreens in foundation plantings. Price: 12 to 15 inch \$2.00. 8 TO 10 INCHES, EACH \$1.00

PYRAMIDAL ARBOR-VITAE

Probably no evergreen is more admired than Pyramidal Arbor-Vitae with its beautifully carved foliage of deep green, its graceful, refined habits and its artistic upright shape. These features make it indispensable in the home foundation groups and in the lawn and garden plantings. Price: 18 to 24 inch \$3.00 each. 8 TO 10 INCHES, \$1.00 EACH

IRISH JUNIPER

Forms a narrow and dense column, compact, bluish green foliage. Most attractive when planted around the foundation of a home at corners and entrances. Price: 24 to 36 inch \$3.00 each. 8 TO 10 INCHES, EACH \$1.00

COMPACT GLOBULAR ARBOR-VITAE

HICKS' YEW
(Taxus cuspidata Hicksi)

HICK'S YEW

Another form of Yew that is very similar to the Irish Yew, but is a much faster grower. The branches ascend almost vertically, generally growing with many stems. Its rich dark glossy green makes it much more attractive than Arbor-Vitae or Junipers. Price: 12 to 15 inch \$2.50 each. 8 TO 10 INCHES, EACH \$1.00

PYRAMIDAL ARBOR-VITAE

All evergreens are shipped with Moss on the Roots.

American BOXWOOD

GROWN BY HARRISON BROTHERS
BERLIN, MARYLAND

Steps Out Ahead

—the real Aristocrat of the Evergreen family

YOU CAN SECURE THE FINEST SPECIMENS IN AMERICA FROM HARRISONS'

Possibly no evergreen shrub has been so much used for marking the boundaries of formal gardens, to outline flower beds, for low hedges, and for other ornamental purposes. The plants will adapt themselves to almost any situation and climate, and by judicious pruning can be trained to many forms.

Compact—Deep Glossy Leaves

Our Boxwood has deep glossy green leaves. They are dense, compact specimens, having been sheared many times. The leaves

on this variety are small and resemble the dwarf English Boxwood. This variety is a dwarf grower, but it makes much faster growth than the English Boxwood. For those who want large Boxwood plants in a few years, this is the best variety to plant.

PRICES OF AMERICAN BOXWOOD
10 to 12 inches \$1.50 each; 10 for \$12.50

OLD ENGLISH BOXWOOD

The famous Dwarf Boxwood so much admired in old gardens. Slow growing, compact, most attractive. Will grow in sun or partial shade.

3 to 4 in. 55c ea.; 10 for \$5.00
4 to 6 in. 85c ea.; 10 for \$7.50
6 to 8 in. \$1.25 ea.; 10 for \$11.00

Red Bird DELICIOUS

Blazing **RED**

NEWEST "SPUR-TYPE"—"SOLID RED BUD SPORT"
A Marvelous Discovery For Fruit Growers

A standard tree, but medium in size, of the popular "spur-type." This "mutation," being a "red bud sport" strain. The tree is about 65% to 75% of the normal full size Triple Red Delicious standard tree. The purplish-pink will begin to show around the first of August with small inconspicuous lenticles. Will develop into full, beautiful, handsome, solid crimson, scarlet, ruby red colored apples during late August, depending on the section of United States the tree will be planted. The excessive fruit spur formation is associated with early heavy fruiting. This "mutation" may be from Triple Red Delicious. Similar to Bisbee strain of Red Delicious, also called Starkrimson. Also similar to Chelan Red Delicious in coloring characteristics. Large size apples with gorgeous, magnificent, attractive solid red coloring without stripes, being elongated with pronounced five points on the end of the fruits, having superior excellent flavor. 25¢ extra per tree.

SUPPLY OF TREES WILL BE LIMITED—SAVE DISAPPOINTMENT—ORDER NOW

SEE PRICES ON PAGE 16

ALL POINTS TO YOUR FUTURE PROFITS

Comes into bearing earlier because of its type and strain. Colors much earlier for first market high prices. Easy to grow—spray—trim—pick and pack. Extra fancy grades for the package trade.
